LOGO REFRESH · ROUND 2 CONCEPTS

Onshore Air

Three logo concepts for the Sunshine Coast's air-conditioning specialists. Each keeps the sun-meets-sea idea Luke already owns, rebuilt as a modern logo system that holds up on a 6 m van and at 16 px in a browser tab.

Client Onshore Air, Pacific Paradise QLD **Prepared by** LeadHive AU **Date** 26 October 2026

STRATEGY

Hot outside, cool inside. Told once, simply.

Blue owns Australian air conditioning: 13 of the 15 brands we audited lead with blue. Red is the OEM accent, and local installers default to snowflakes, swooshes and the same stock fonts. Nobody owns the coastal warm-to-cool story, and Onshore Air's sun-meets-sea sphere already tells it.

The job is to keep that idea and make it professional: flat shapes, a confident name in a strong typeface, and a complete set of files.

1. Keep the circular sun/sea symbol and its warm/cool split. It is what people already recognise, and it describes the product.
2. Rebuild it as flat shapes: no gradients or hairlines, with gaps wide enough to embroider.
3. Lead with deep navy. Make sun-gold the signature and ocean blue the cool counterpoint.
4. Replace the outlined lettering with a heavy, easy-to-read typeface.

5. Ship every version needed, from the van to the browser tab.

What we keep

- The circle: sun, sea and air in one shape
- The warm-versus-cool split
- Navy, yellow/gold and ocean blue

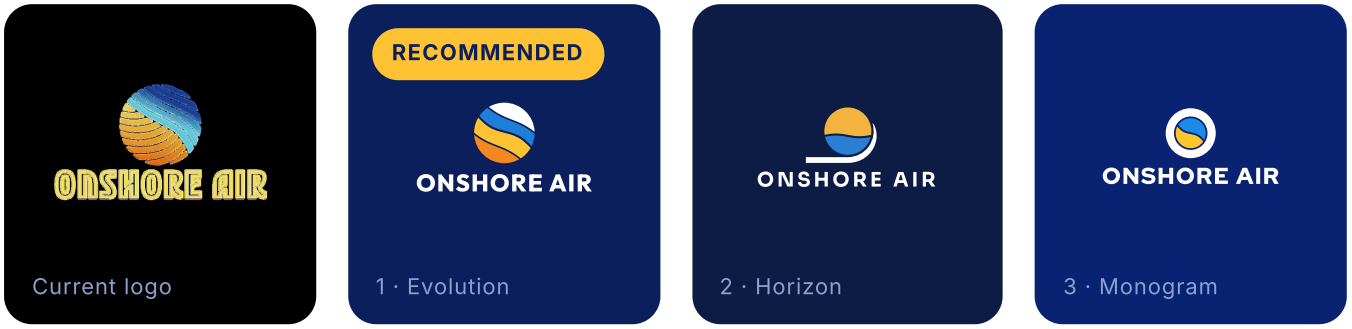

What we fix

- Outlined lettering that is hard to read
- Gradient stripes that cannot be embroidered or printed in one colour
- No small, horizontal, one-colour or reversed versions, and no spacing rules

BEFORE AND AFTER

Same idea, three ways forward

The current logo (left), as supplied, beside the three concepts, each on its own navy as it would appear in the website header. Concept 1 keeps today's diagonal sun-meets-sea split most directly, which is why it is our recommendation.

How to choose

Don't judge them only as logos on a white page. Open each concept and look at it on the van, the polo and your Google listing, or use Compare to see all three side by side. Pick the one that still feels like Onshore when it is small, far away or moving past. It's fine to say "this one, but with that colour". Mixing is part of round two.

RECOMMENDATION

Go with Concept 1, Evolution

1. **It keeps the identity Onshore already has.** Customers already know the diagonal sun-meets-sea split from the van, the shirts and the Google listing. Evolution is the only concept that keeps it as the whole mark, so the refresh reads as an upgrade, not a rebrand.
2. **It has the most personality.** Four flat colours carry on a van at distance and stand out in a social feed or a Maps list, where most trades are blue on white.
3. **It passes the practical tests.** The favicon cut reads at 16 px and the embroidery cut has widened gaps. Every lockup has one-colour and on-navy versions.
4. **Its trade-offs are manageable.** It is the most colourful of the three, so one-colour jobs use the mono files, and at the very smallest sizes the bands read by colour rather than by shape.

Runner-up: Concept 3, Monogram, for a client who wants maximum simplicity. It is technically the safest at small sizes, and its O now carries the diagonal split. But the ring dominates, and the overall silhouette reads as generic, a porthole or a bank badge that could belong to any company. Its small-size advantage is real, but Evolution already passes the 16 px test with its favicon cut.

Concept 2, Horizon is the premium outlier: the most refined at large sizes, but the least connected to the logo customers know today.

NEXT STEPS

What we need from Luke

1. Confirm the direction. We recommend Evolution, and elements can be mixed, for example Monogram's heavier wordmark with the Evolution mark.
2. One round of refinements on the chosen concept (colour, weight, descriptor wording).
3. Final artwork: master SVG files, print PDFs with CMYK values proofed by the printer, an embroidery file digitised from the one-colour artwork, and the van wrap scaled from SVG.

Prepared by LeadHive AU for Onshore Air · 26 October 2026 · Concepts are original artwork; typefaces are licensed under the SIL Open Font Licence.

01

CONCEPT 1 RECOMMENDED

Evolution

This is the sun-meets-sea sphere Onshore Air already owns, rebuilt as four flat bands so it prints, embroiders and still reads as a favicon.

The diagonal S-split tells the product story at a glance: Sunshine Coast heat in the bottom-left, cool ocean air in the top-right.

Paired with a heavy, round-shouldered Outfit wordmark, it looks like the same company, grown up.

02

CONCEPT 2

Horizon

The sun sits on a single line that is both the coastline horizon and the onshore breeze. It runs flat under the sun, then sweeps up the right side and tapers away like a gust of sea air.

Inside the sun, the warm/cool split is kept as sun over sea, and the whole mark uses only two main colours plus an ocean-blue accent.

Set in a wide-tracked Sora wordmark, it has the calm restraint of an OEM dealer badge and is the most premium of the three in large formats.

03

CONCEPT 3

Monogram

A navy O, the initial of Onshore, frames the original diagonal sun-meets-sea split: warm bottom-left, cool top-right.

It is the simplest, sturdiest silhouette of the three, so it holds up at 16 px, on a cap and as a Google avatar.

The Red Hat Display Black wordmark adds corporate weight. The trade-off is that the ring makes it read more like a badge than a personality.

GUIDELINES

Clear space

Leave a gap of **x** on every side, where x is the height of the capital letters in ONSHORE. Nothing else (text, photos, the edge of a van panel) goes inside the dashed line. The supplied files already include half of that gap.

1 · Evolution

2 · Horizon

3 · Monogram

GUIDELINES

Smallest sizes

LOGO	SMALLEST ON SCREEN	SMALLEST IN PRINT	USE IT FOR
Horizontal, with descriptor `horizontal.svg`	240 px wide	60 mm wide	Van side, signage, invoices, email signature, website header on a computer
Compact horizontal `horizontal-compact.svg`	120 px wide	30 mm wide	Website header on a phone, social banners, small print
Stacked logo `primary-stacked.svg`	120 px wide	25 mm wide	Business cards, square social posts, shirts and signs where space is square
One-colour, for embroidery `mono-navy.svg` · `mono-white.svg`	n/a	60 mm wide (polo chest), 50 mm (cap front)	Embroidery, engraving, one-colour print, van magnets
Icon and avatar `icon.svg` · `icon-app.svg`	64 px	8 mm	Google Business Profile, Facebook and Instagram pictures

LOGO	SMALLEST ON SCREEN	SMALLEST IN PRINT	USE IT FOR
Browser-tab icon `favicon.svg`	16–48 px	n/a	Browser tab and bookmarks. It turns its navy white in dark browsers

GUIDELINES

Which file do I use?

The file names are the same in every concept pack.

Van wrap or sign

Send the signwriter `horizontal.svg`. It is a vector file and scales to any size; never enlarge a PNG. Use `horizontal-mono-navy.svg` for one-colour cut vinyl.

Polos and caps (embroidery)

Send the embroiderer `mono-white.svg` for navy shirts, or `mono-navy.svg` for white or light shirts. Ask for a sew-out sample first.

Google, Facebook, Instagram picture

Upload `png/icon-app-512.png`. The platforms crop it to a circle and it is designed for that.

Website

`horizontal-on-navy.svg` in the header on a computer, `horizontal-compact-on-navy.svg` on a phone. Your web person will know what to do with these.

Invoices, quotes and email signature

`horizontal.svg`, or `png/horizontal@2x.png` where the software will not take SVG.

Browser tab (favicon)

`favicon.svg`, plus `png/icon-32.png` as a fallback and `png/icon-app-180.png` for iPhones.

Business cards

`primary-stacked.svg` on the front, `icon-on-navy.svg` on a navy back.

One-colour jobs (stamps, engraving)

The `mono-` and `icon-mono-` files, in navy or white.

DOWNLOADS

Download packs

Each pack has every SVG file, PNG versions at 2× and icon sizes, and a one-page README with the colours, font, minimum sizes and which file to use for what.
